LISTING OF CLAIMS

(1) (currently amended) A method for displaying <u>program</u> <u>messages</u> ~~character strings~~ on GUI environment <u>as text</u> <u>file character strings</u> provided by a computer program, comprising the steps of:

(a) providing an executable program;

(b) providing a text file including <u>descriptions of</u> <u>text file</u> ~~said~~ character strings and being openable with said executable program;

(c) executing said executable program;

(d) <u>automatically</u> opening the text file and retrieving said <u>text file</u> character strings from the executable program <u>so that program messages can be generated as</u> <u>text file character strings;</u> and

Serial No. 09/755,308
Art Unit No. 2671

(e) displaying program messages as text file ~~the~~ character strings included in the opened text file.

(2) (currently amended) The method of Claim 1 wherein said text file further includes a search key and wherein said opening and displaying comprise the steps of:

searching said search key;

retrieving the text file character strings in said text file when said search key enabled is detected in said searching;

displaying program messages in the retrieved text file character strings; and

displaying program messages in character strings embedded in said executable program when the search key disabled is detected in said searching.

(3) (canceled)

(4) (canceled)

(5) (currently amended) A method for creating a computer program enabling <u>program messages</u> ~~character strings~~ to be displayed on GUI environment <u>as text file character strings</u>, including the steps of:

describing a code for providing said GUI environment;

describing a code for <u>automatically</u> opening a text file including said <u>text file</u> character strings; and

describing a code for displaying <u>program message as</u> character strings <u>as</u> described in said opened text file.

(6) (currently amended) A method for creating a computer program of Claim 5 further comprising describing a default character string and wherein said describing a code for opening a text file and said describing a code

Serial No. 09/755,308
Art Unit No. 2671

for displaying <u>program messages as</u> character strings comprise the steps of:

describing a code for searching a search key of a text file including a selected <u>text file</u> character string; and

describing a code for displaying said selected <u>text file</u> character string when said search key to be enabled is detected and for displaying said default character string when said search key of said text file to be disabled is detected.

(7) (currently amended) A recording medium for recording a computer program enabling <u>program messages</u> ~~character strings~~ to be displayed on GUI environment <u>as text file character strings</u> and enabling a computer to read said recorded computer program, including:

a code for providing said GUI environment;

JP920000027   -5-

Serial No. 09/755,308
Art Unit No. 2671

a code for automatically opening a text file including
said text file character strings; and

a code for displaying program message as said character
strings as described in said opened text file.

(8)   (currently amended) The recording medium for recording
a computer program of Claim 7 further comprising a code
for providing a default character string and wherein
said code for opening comprises a code for searching a
search key of a text file including a selected text
file character string, and wherein said code for
displaying comprises a code for displaying said text
file selected character string when said search key to
be enabled is detected and a code for displaying said
default character string when said search key to be
disabled is detected.

(9)   (currently amended) A method for creating a computer
program including control-related character strings,
including the steps of;

JP920000027   -6-

Serial No. 09/755,308
Art Unit No. 2671

(a) creating a text file describing said control-related text file character strings; and

(b) creating a program file describing a code for automatically opening said text file to generate control related program messages as said text file character strings.

(10) (currently amended) The method for creating a computer program of Claim 9 wherein said creating a text file comprises creating a text file including a selected control-related text file character string and a search key; and, wherein said creating a program file comprises creating a program file including a default character string and a code for automatically shifting control to said selected control-related text file character string when said search key to be enabled is detected and giving control to said default character string when said search key to be disabled is detected.

(11) (currently amended) A <u>program storage device readable</u>
      <u>by machine tangibly embodying a program of instructions</u>
      <u>executable by the machine to perform a method to</u>
      <u>generate</u> ~~structure of a computer program including~~ at
      least one <u>control-related text file</u> character string
      related to computer control, <u>said method</u> including <u>the</u>
      <u>steps of</u>:

      ~~a code for~~ <u>automatically</u> opening a text file including
      said at least one <u>control-related text file</u> character
      string <u>to generate control related program messages as</u>
      <u>said text file character strings;</u> and

      ~~a code for~~ using said at least one character string
      described in said opened text file to control said
      computer.

(12) (currently amended) The <u>program storage device</u>
      ~~structure of a computer program~~ of Claim 11 further
      comprising a default character string and wherein said
      ~~code for~~ opening a text file comprises ~~a code for~~
      searching a search key of a text file including a

Serial No. 09/755,308
Art Unit No. 2671

selected <u>control-related text file</u> character string;
and wherein said ~~code for~~ using at least one character
string comprises ~~a code for~~ using said selected
<u>control-related text file</u> character string to control
said computer when said search key to be enabled is
detected and ~~a code for~~ using said default character
string to control said computer when said search key to
be disabled is detected.
